- ✓ VS Code

- ✓ Git/GitHub/GitLab
- ✓ Figma/Photoshop/Canva
- ✓ CodePen

SOFT SKILLS

- ✓ Communication
- ✓ Teamwork and collaboration

- ✓ Leader Ship
- ✓ Positive attitude

WORK EXPERIENCE

Full-stack Web Developer.

01 Nov 2023 - Present

Touch And Solve

Plot 6 (3rd Floor), Road 1/A, Sector 17, Uttara South, Dhaka 1230, Bangladesh

PROJECTS

Apromise - Institute & Student Management Software

Apromise is an institute student management software, designed to manage students, academic activities, attendance, results, and job placement operations in a centralized system.

Role :

- Developed all backend APIs for the application. Implemented attendance synchronization for accurate and consistent student attendance data
- Worked on result management modules for processing and displaying student results
- Contributed to job placement features, supporting student placement tracking
- Provided client support and handled operational issues
- Optimized database queries to improve system performance

Technology Used : Laravel, PHP, MySQL

GeoTrack – Real-Time Location & Monitoring System

GeoTrack is a real-time tracking system for managing centers, officers, and live location data with a secure and scalable backend. It provides RESTful APIs for mobile app integration, real-time location visualization, geofencing, and reporting.

Role :

- Developed the complete backend system independently
- Designed and implemented RESTful APIs for mobile app integration
- Implemented real-time location tracking and geofencing logic
- Managed database design and optimized queries for performance
- Integrated secure API authentication and authorization

Technology Used : Laravel, PHP, MySQL

Al Hadi Express - E-Commerce

Fully responsive multi-vendor eCommerce website with role-permission-based authentication, seamless checkout, and integrated online payment methods. Designed for a smooth shopping experience with advanced product filtering.

Role :

- Modified and enhanced full website design for better UI/UX.
- Optimized site performance for faster loading speed.
- Integrated secure online payment methods.
- Implemented advanced product filtering features.

TSVMS - Vat Management System

A comprehensive VAT management solution developed for businesses to manage and automate tax-related operations. The platform includes modules for sales, purchase, stock, Mushak reporting, and MIS reports, offering an integrated and user-friendly system for accurate VAT handling.

Role :

- Worked on the frontend development using Next.js
- Integrated multiple Mushak report APIs for dynamic data visualization and reporting.
- Built and optimized Company Master Setup modules (create, update, and view).
- Designed and developed responsive list and view pages for all core modules.

Technology Used : Next js , C#/ASP.NET Core 9, MS SQL Server 2016,

Touch Queue – Queue Management System

Fully functional queue management system suitable for hospitals, supermarkets, and banks. Includes a 15-day trial version with automatic user disable after trial expiration, enhancing user onboarding and licensing control.

Role :

- Designed the complete frontend of the public site.
- Partially designed and modified the admin dashboard layout.
- Resolved critical issues related to queue counters.
- Developed partner registration functionality.

Technology Used : php-laravel , C++, Flutter, MySQL, jQuery, Tailwind.
